### ABSTRACT

The author of this study follows a holistic definition of sustainability and relates it to educating a person with a highly developed sense of community-based lifestyle, well expressed sense of self-consciousness, an ability to make decisions and one who lives in a harmony with oneself and a surrounding environment. Experience or problem-based approach towards learning (hereinafter PBL) and teaching could be seen as a potent option to develop internally and externally socially responsible person since PBL method involves formal, non-formal and informal learning in this direction and primarily seeks to attain a quantitative reasoning, learn to think critically to solve problems, be able to work and learn both independently and collaboratively, engage questions of ethics and recognize to self, community, and society at large. Thus, by applying a PBL method, the approach can be adapted to specifically address multiple values, attitudes and behaviours regarding a number of different topics.

**Key words:** problem based learning, higher education.
